Empower Your School with Data

Schoolrunner by SchoolMint is a comprehensive management system that provides a solution for your evidence-based teaching and learning needs. Schoolrunner works alongside your Student Information System to make sense of your data. With Schoolrunner, educators easily log and track attendance, behavior, and performance on the web or mobile app.

Create custom reports, log communications, set up virtual attendance codes, publish progress reports and report cards to the parent portal, and so much more with Schoolrunner. Schools improve outcomes for students when every day is data day.

"

Schoolrunner has revolutionized the way we look at education data and make decisions. From an operational standpoint, the fact that everything is in one place saves an incredible amount of time."

Chief of Staff,
at Collegiate Academies

Gain Insight

Schools gain insight into some harder-to-see gaps, including racial and socioeconomic disparities in academics and culture. The in-depth analysis tool and report generator allows schools to uncover hidden truths and make data-based decisions that improve outcomes for all students.

Save Teachers Time

Educators save time by choosing what type of data input works for them: using LMS integrations, scanning bubble sheets with GradeCam or CSV import on the web, or even voice recording on the mobile app. Through sortable gradebooks and dynamic groupings, educators can easily and efficiently track critical information.

Increase Parent Engagement

Through the Parent Portal, school-to-home messaging, and the ability to easily track and log communication home, parents are more connected to their child's school and have a stronger understanding of how to support their student's academic and personal success.
